

PRODUCT INFORMATION SHEET

VM Compound

Description

Variomorph Compound is designed to rapidly remove fine-grade sanding marks after flattening or de-nibbing with 1500 and 2000 grade abrasive (wet sanding or dry machine sanding) from factory-finish or refinished paintwork.

Directions For Use

Availability – TFC106: 1ltr

Shake the bottle thoroughly before use.

Apply compound to panel and spread across the surface. Alternatively apply compound to pad.

Place the pad directly over the panel and start compounding with an electric or air-driven polisher at 1800-2500 rpm for fast clean results. Repeat application as necessary, slowly reducing pressure on the pad towards the end of the application.

Finish as necessary with a soft cloth, or for a perfect durable mirror finish use Nanomeric Glaze.

Important – Always ensure paintwork is fully cured, and the surface to be treated is suitably prepared, and fully degreased with Tetrosyl Compliant Wipe. Remove excess or splashed compound quickly from adjacent panels with a soft, clean cloth. Apply compound to small, workable areas before moving onto the next panel.

Storage – Store in a cool dry place.

Safety – See separate Material Safety Data Sheet (MSDS)

FOR PROFESSIONAL USE ONLY
